

Plastic waste and recycling containers (AWB)

Proposal for a price adjustment clause

Preliminary remark – price adjustment in the event of index changes:

Either party may demand an adjustment of the contract prices if the relevant price/cost indices have changed by more than 5% upwards or downwards in total compared to the index level of the base month (e.g. December 2023) or the last time a price adjustment was made.

The respective index levels are available approximately three weeks after the end of the month.

A request for adjustment can be made up to the last workday of a month and then applies to all deliveries from the following month.

The respective container price is calculated based on the following formula:

$$P_{\text{new}} = P_{\text{old}} \times (0,10 + 0,10 \times M1/M0 + 0,30 \times \text{re}M1/\text{re}M0 + 0,10 \times K1/K0 + 0,20 \times E1/E0 + 0,20 \times L1/L0)$$

Legend:

P = Price

M = Material (KI: PE-HD standard injection moulding, reference price – GGAWB website)

reM = Secondary material (KI: re-HD standard injection moulding black, reference price – GGAWB website)

K = Fuel (GP19-1920260052, Federal Statistical Office: Producer price index ind. prod. for diesel fuel, distribution to bulk consumers, Genesis-online 61241-0004)

E = Energy (GP19-351115200, Federal Statistical Office: Producer price index ind. Prod. for electricity sold to special contract customers (high-voltage, 4 million kWh, Genesis-online 61241-0004)

L = Wage (WZ08-38-01, Federal Statistical Office: 62231-0001 Indices of collectively agreed earnings, Germany, months, economic sectors, code VST066)

A request for a price adjustment must be accompanied by the calculation and proof of the development of the relevant cost elements.
